

Blue Prism RPA Consolidation Exercise Solution

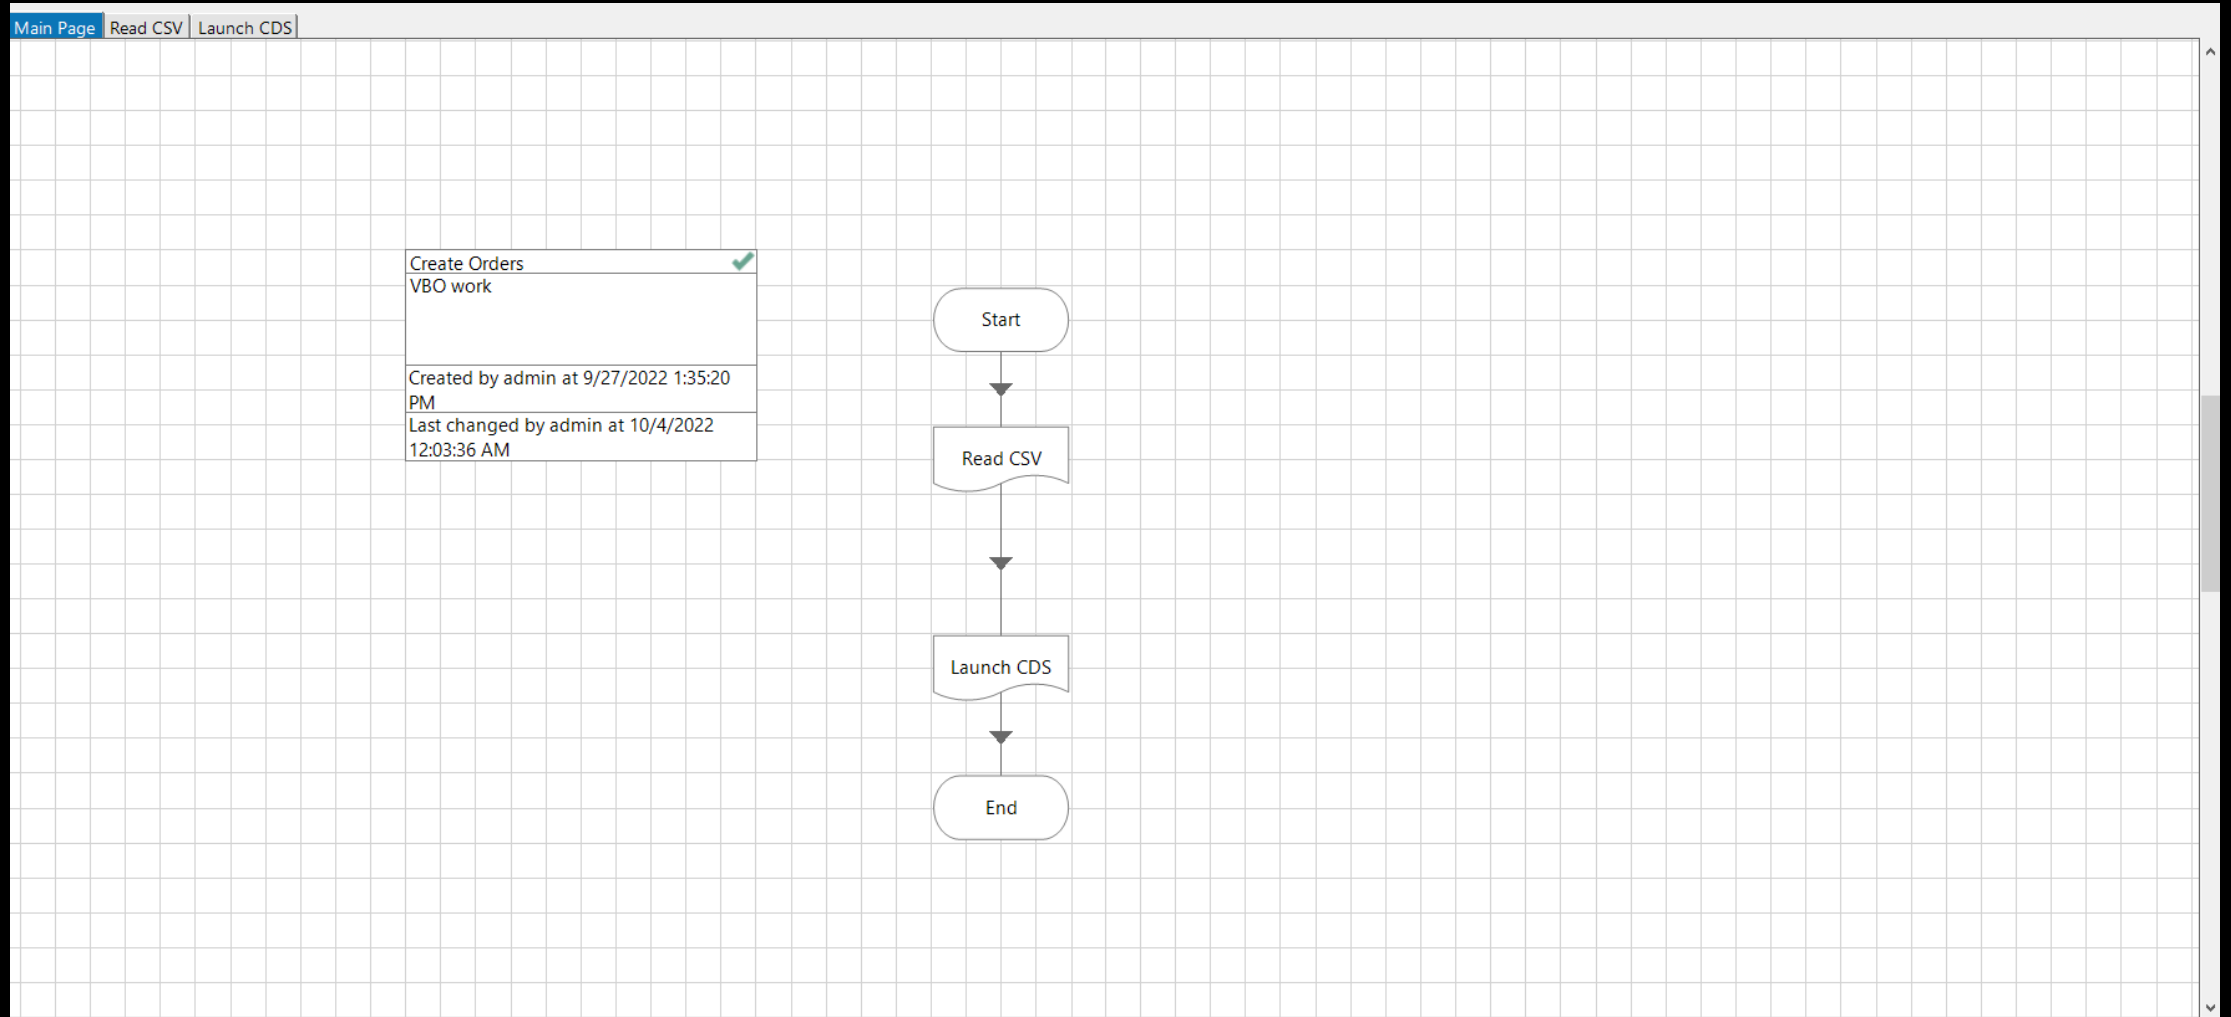

Jason Santucci

The goal

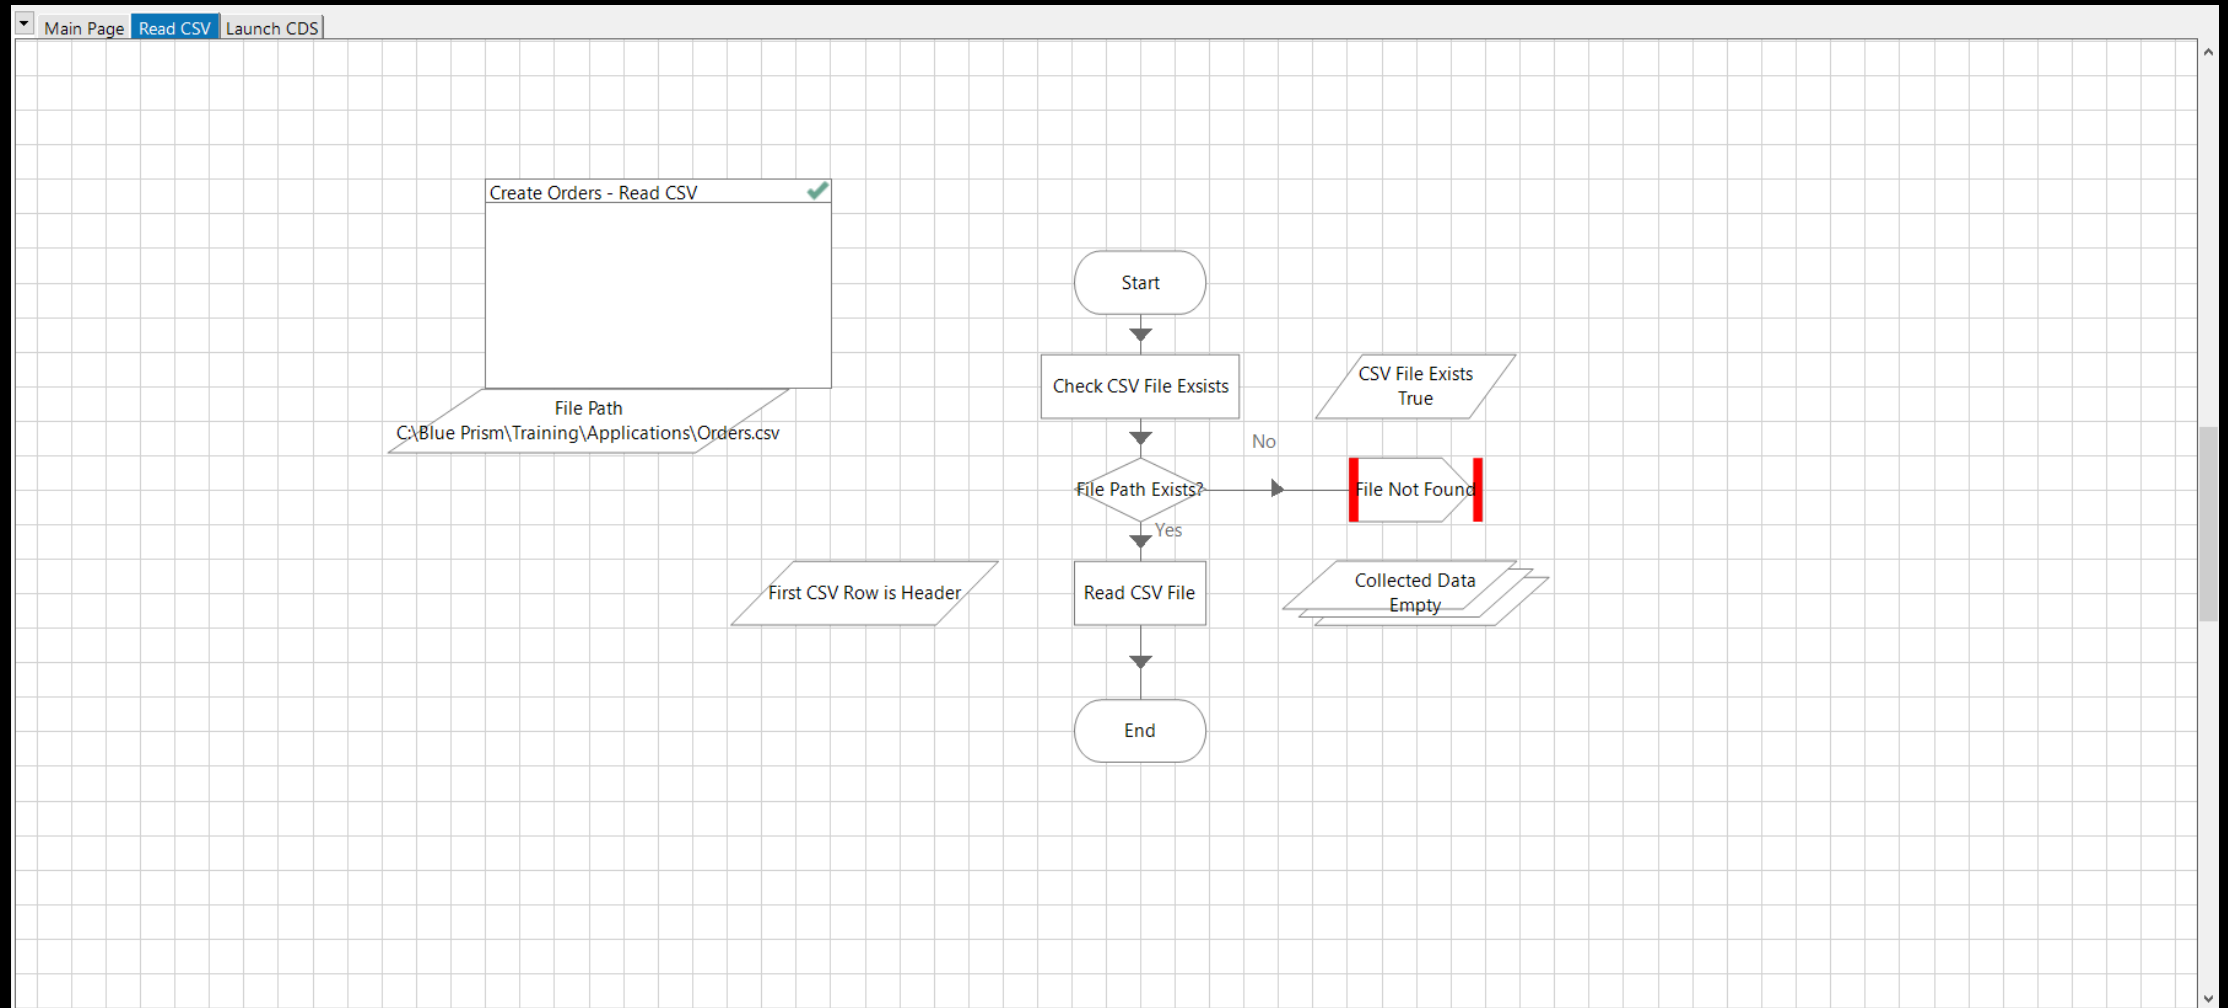

- The goal of this exercise is to program Blue Prism to read customer data from an Excel Sheet and input the data into a software named Data Centrix Solutions.

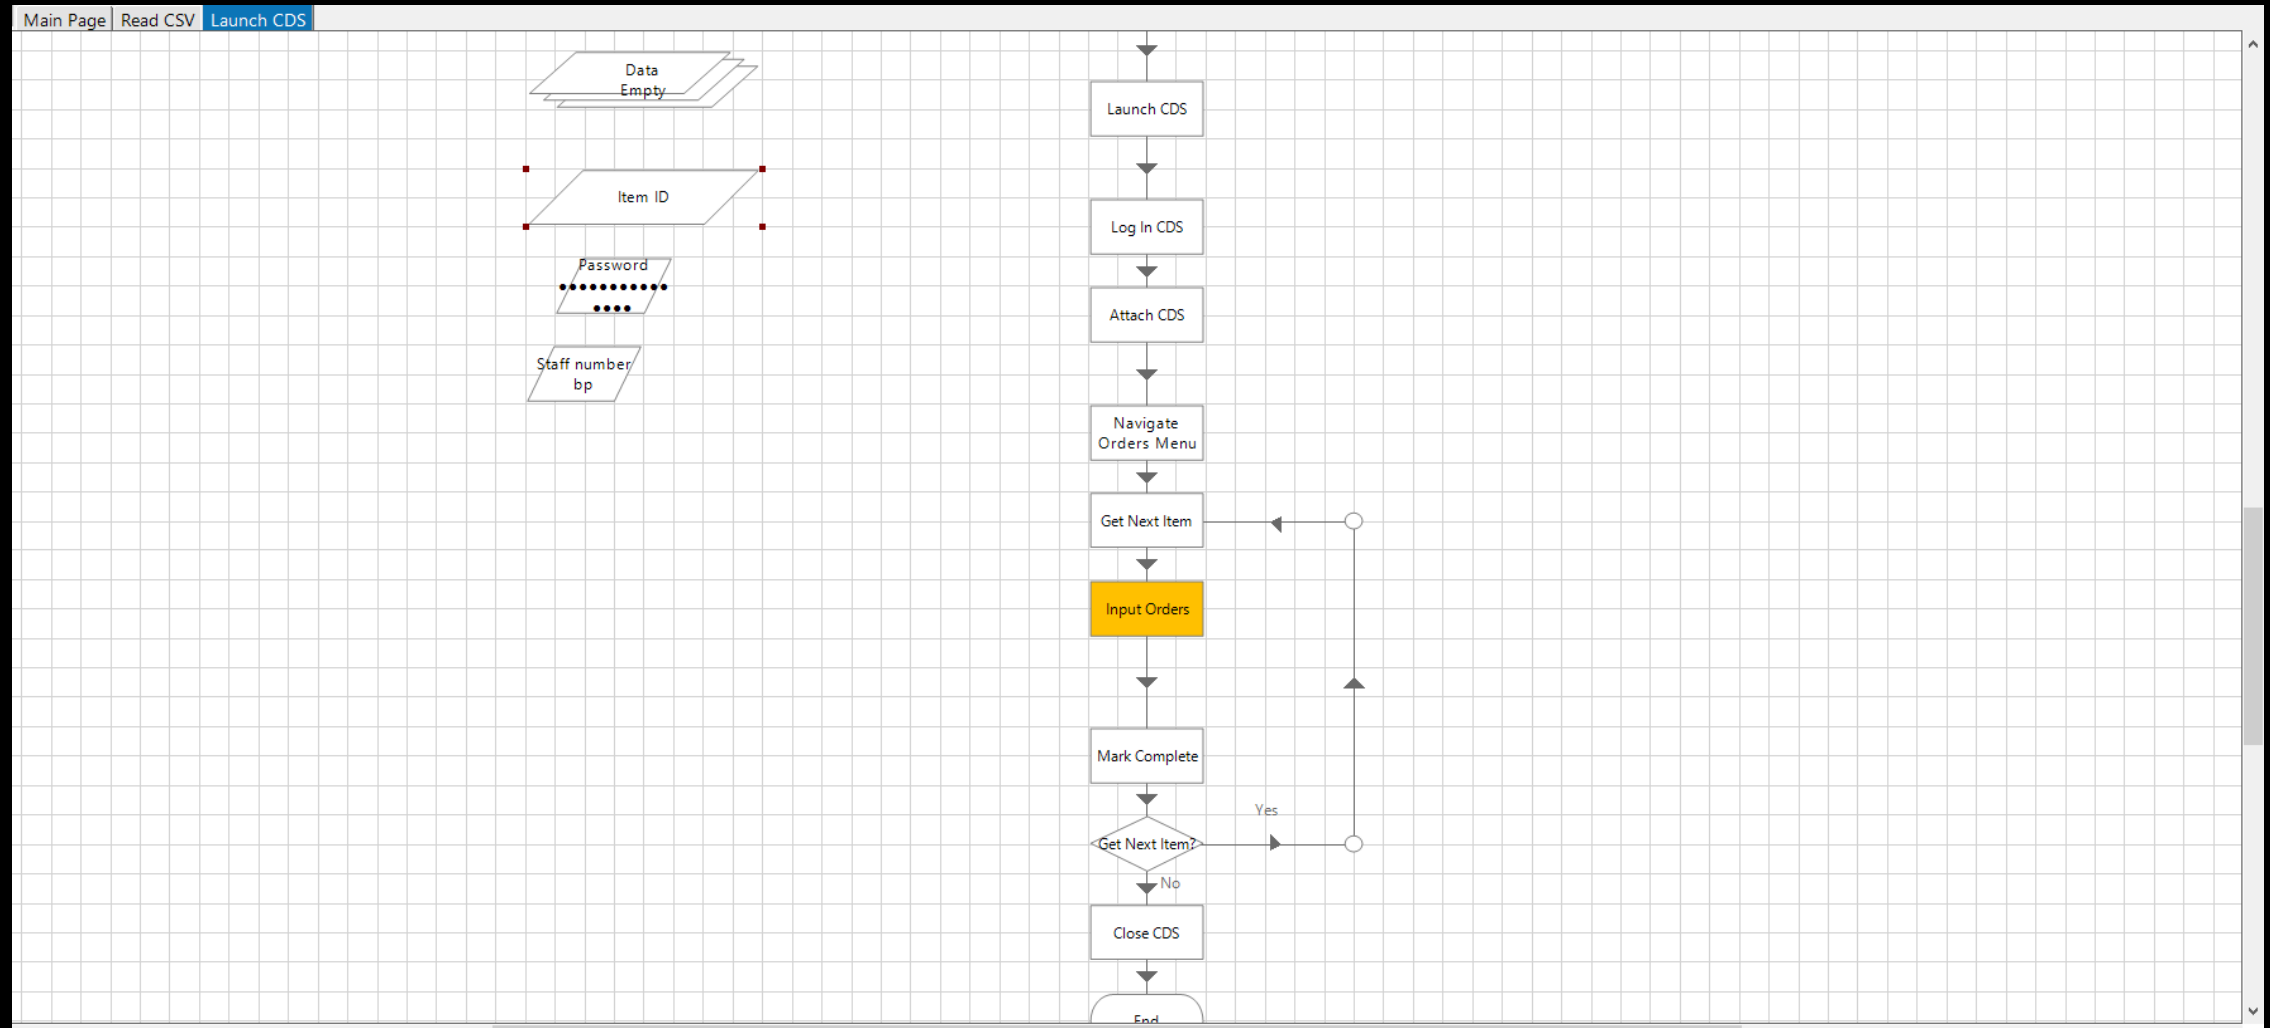

Overview of the Automation Process

First step is to read the CSV file and input it into a data collection node

Finally, this process will launch Centrix Data Solutions, Login, and navigate the software, input the orders, and repeat until every order has been completed

This is the control room where the data can be queued to run at any point
